SUMMARY

Software engineer experienced in building scalable APIs, cloud-native pipelines, and secure backend systems using **Python**, **Node.js**, **Supabase**, and **Docker**. Led ingestion architecture and role-based schema design for a production analytics platform, integrated a **payment gateway**, automated **CI/CD workflows** to accelerate delivery by **60%**.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C++, HTML, CSS
- **Frameworks & Tools:** Flask, Django, Node.js, React.js, Spring Boot, NumPy, Pandas, Git, Jira
- **Technologies:** AWS, Docker, Kubernetes, CI/CD, MongoDB, Apache Kafka, Machine Learning
- **Core:** OOP, SDLC, Design Patterns, DSA, Best Practices, Technical Documentation

PROFESSIONAL EXPERIENCE

Software Developer Intern

Jun 2025 – Aug 2025

Propvia, Detroit, MI

- Led **schema architecture** in **Supabase**, applying **Row-Level Security** to isolate user data and control access to **premium features** across **3+ user roles** and **4+ tiers**.
- Engineered a daily asynchronous ingestion pipeline from the **LoopNet API**, handling **authentication**, **pagination**, and **auto-retries** to fetch and enrich **1,000+ listings**, powering property search, scoring, and investment analysis.
- Developed **10+ RESTful APIs** (auth, payments, scoring) and documented using **Swagger**, enabling smooth frontend and third-party integration.
- Orchestrated **CI/CD pipelines** with **GitHub Actions** to deploy **Dockerized services**, cutting deployment time by **60%**.
- Constructed a fully automated **payment and notification system** by integrating **Stripe** and **Postmark**; streamlined subscription handling, invoicing, and email confirmations, reducing manual ops by **40%**.
- Wrote **unit and integration tests** using **Jest** and **Postman**, improving backend stability and continuous integration.

System Engineer (Software Engineer)

Oct 2021 – Aug 2024

Boston Scientific (TCS), India

- Developed backend **microservices** in **Python (FastAPI)** and integrated with **AWS Lambda** for event-driven workflows, cutting infrastructure costs by **30%**.
- Programmed **15+ RESTful APIs** (authentication, reporting, data ingestion), improving developer adoption by **40%** and supporting **1K+ daily requests**.
- Re-engineered legacy **ETL workflows** into scheduled **Python services**, automating processing of **10K+ records**, reducing manual effort by **30%**, and accelerating reporting by **70%**.
- Integrated **CI/CD pipelines** with static analysis and unit testing, remediating **600+ issues**, ensuring **99.9% uptime**.
- Implemented centralized **logging and monitoring** using **AWS CloudWatch** and **Grafana**, enabling real-time issue detection and reducing mean time to resolution (MTTR) by **35%**.

PROJECTS

ML-Powered Hypothesis Testing Dashboard

*Built with Python Streamlit for real-time statistical modeling over **2.5M+ NeurIPS records**. Enabled fast experimentation with **SVM**, **ANOVA**, **Logistic Regression**.*

Cloud-Hosted Expense Tracker Web App ([Live Demo](#))

*Architected and deployed a full-stack **MERN** application on **AWS EC2** using **Nginx** and **PM2**. Integrated **CI/CD pipelines** for automated deployments and implemented expense categorization with visual insights, reducing manual reporting by **80%**.*

EDUCATION

State University of New York at Buffalo, NY

Aug 2024 – Dec 2025

M.S. in Computer Science, GPA: 3.6/4

Rajiv Gandhi Proudhyogiki Vishwavidyalaya, India

Aug 2017 – Jul 2021

B.E. in Computer Science, GPA: 7.7/10

CERTIFICATIONS

- AWS Cloud Practitioner Essentials (Amazon Web Services)
